EXPERIENCE

Electrical & Controls Co-op
Dynamic Attractions
📅 May 2019 – Aug 2019 　📍 Port Coquitlam, B.C.

- Development and programming of a ride system HMI for error and data tracking
- Utilized Excel and Autodesk Vault to organize documentation and records
- Conducted and monitored factory acceptance testing (FAT) of high voltage prototype ride systems
- Troubleshooting IP and network issues to establish data transfer and communication for multiple projects

PROJECTS & COURSEWORK

UBC Concrete Toboggan – Electrical Sub-Team
Multiple Projects 　📅 September 2017 – Present

- **Color Organ Circuit** – Takes an audio input and outputs varying signals to LEDs to simulate an RGB equalizer, with the intention of accompanying the toboggan model at a showcase
- **Wireless Bluetooth Communication** - Helped implement Bluetooth communication between two Arduino modules in order to record important strain and stress data in the toboggan

Semester Design Projects
Multiple Projects 　📅 January 2019 - April 2019

- **AC Voltmeter & Oscilloscope** – In C, programmed an AC voltmeter to measure phasor amplitude and phase, and simulated the AC signal in a Python script, then stored data in an Excel file
- **Autonomous Robot** – In a team of 6, designed and built a fully autonomous coin collecting robot programmed in C. Enabled wireless Bluetooth communication to store and plot data in an Excel file using Python scripting.
- **Reflow Oven Controller** – Collaborated to program a reflow soldering oven controller. Programmed the FSM and LCD GUI, as well as the Python graphing module

Portfolio Website
Personal Project 　📅 January 2019

- Designed my own website to serve as an online portfolio
- Includes simple animations, links, personal project portfolio, and resumé
- Coded from the ground up using HTML, CSS, and Javascript

Interests & Hobbies

Snowboarding, Hockey, Chess, Video Games, Live Concerts, Technology, Making Friends, Learning New Things, Food

EDUCATION

BASc, Engineering Physics
University of British Columbia
📅 Sept 2017 – Present

- Expected Graduation – May 2023
- Available for **4 months** starting January 2020

SKILLS

Programming

Java 　C 　Assembly 　Verilog 　Arduino 　MATLAB 　Python 　Makefiles

Electrical

Circuit Design & Analysis 　Soldering 　Digital Logic Design 　Multimeter 　Oscilloscope

Software

Git 　Visual Studio 　Quartus 　ModelSim 　Word 　Excel 　Powerpoint 　Overleaf 　HMI Programming

Soft Skills

Love of Learning 　Extremely Organized 　Technical & Persuasive Presentations 　Communication 　Detail Oriented
